Dear Sir:

Herewith by Boland you piece of plant with request that you may have the goodness to name. I understand that some one had already asked the same favor and that a friend of mine I heard of the name but the letter is so poorly written that I can hardly make out. at same time would thank you for any information relative to its characteristics - I deem unnecessary to send whole plant as you have already in possession from which you named.

The other plant I am surprised that same has never come under your observation

a it abound pretty freely -
Any favor that I
might be able to extent
will of course be done
cheerfully and I shall
do all to avail myself
of such an opportunity
whenever offers.

Very Respectfully
Chas Mueller

Dr. Jer. Engelman
St. Louis

Dear Sir.

Your kind favor & Ct Inst. rec'd; thanks — The Agave having been named to me as probably A. Neteracantha Zucc. and then learning of you naming A. Ledingæ I became concerned at interested to hear from you direct. I have seen Mexicans using some fleshy root but none like this — and the lower portion of the stem is really so small that it is hardly worth using it and the roots are all thread like — When I mentioned another plant — I simply referred to the fact that I had been informed that some one had sent to you the Agave and another specimen for name — that you had termed the agave A Ledingæ, but that you did not know the other plant, that you expressed the belief it being something new and desired a plant when in bloom.

I did not intend to express my thought that you had living plants at your disposal, but simply aimed to explain, ~~that~~ while you had rec'd large specimens from some in Tex. of same plant for name (as I had been informed) that it would be unnecessary for me to enclose large specimen.

If not intruding would request your consent of repeating to send occasionally for naming — Any thing that I can do here to serve You in return will be cheerfully done — if you are interested in living plants, may I send occasionally or do you prefer Herb'n Specimen? if so will preserve. With thanks

Yours Respectfully

Chas Hempel

Dear Sir;

Your kind favor 12th inst. reached me here to day. Blanko - "No 2 Asclepias pauciflora is termed here A. perennis" - No 3 Salvia Pitcheri grows about 10 or 12 feet high which I send herewith a similar flower growing on small bushes about 2-3 ft high - Nos 4 which was too immature is a very shy grower, and all I could do to keep our little stock alive. No 5 Quercus Texana grows tree like about 15 feet high and has about 100-200 flowers every night all summer I enclose another specimen which please name - If I understand right you desire our Oaks both flowering & fruiting - If so, I can send you the specimen with fruit, and will send flowers next spring - I will return to Austin Tex. shortly from where I will send you the

Antigonon of which I have quite many;
they are as you may be aware of a very
beautiful climber.

Did you discover anything new on
your trip to the Rocky Mountains — I wish
~~wh~~I could have been with you.

Ever ready to serve you

I remain

Very Truly
